

ADABT Solution Using Oracle Technologies

Leonardo Consulting collaborates with Oracle to produce a solution for aligned process automation giving repeatable speed and flexibility to organisations

Leonardo Consulting and Oracle are collaborating to offer this packaged solution that will deliver a working business process of your choice. Leonardo Consulting will run structured workshops with key stakeholders in your business to help you select the process. Your business analysts and developers will work with Leonardo personnel to build out the process using Oracle BPM and SOA technologies.

Appropriate business-IT governance will be employed and your people will be enabled by being intimately involved in all aspects of the business process development cycle.

“Use this opportunity to optimise your critical processes, improve effectiveness and maximise the reuse of your current IT system assets!”

The solution will deliver:

- Formal training sessions – for tools and concept usage of the Oracle Products
- A jump start plan – for your organisation’s journey towards business process excellence through rapid alignment, improvement and optimisation
- A Pilot Project Delivery – Knowledge is transferred from us to you.

The pilot project will use Leonardo Consulting’s ADABT solution toolkit and will be conducted using this methodology and a mentoring approach with the focus on knowledge transfer to enable your organisation to produce consistent and repeatable results.

We will work with you on a discovery workshop to identify a candidate process for automation. This is then followed by a 4 phased approach executed over a period of 3 months to deliver:

- Architecture-Driven Platform – based on BPM/SOA/Governance implementation frameworks
- Process automation – a deployed composite application

DISCOVER > **PREPARE** > **TRAIN** > **BUILD** > **REVIEW**
(free)

- Products from Oracle’s Fusion Middleware Suite – You will inherit these products as part of the solution

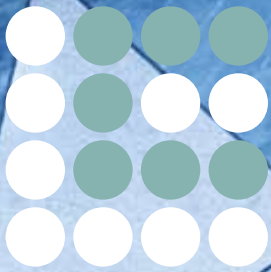

Oracle Products Used:

BPA Suite | SOA Suite | SOA Governance Suite | AIA (Foundation Pack)

ORACLE®

leonardo  **consulting**

About Leonardo We deliver Business Process Management consulting, education and software solutions with a commitment to quality outcomes. This is based on a deep understanding of the role of process management in corporate performance management. Our customers come from a wide spectrum in the public and private sectors in Australia and overseas. They are a diverse group unified by a commitment to process-based management.

What is ADABT?

Architecture-Driven Alignment of Business and Technology achieves the efficient integration of process management and technology to produce rapid, documentable results in your organisation.

ALIGN

STRATEGY TO EXECUTION

Successful Business Process Management (BPM) relies on the ability to effectively and efficiently document, design, analyse, control and improve your value-adding business processes. We call this Business BPM.

Technical BPM is a collection of IT standards and technologies to enable the BPM initiative. These include Services-Oriented Architecture (SOA), process execution (BPEL), service descriptions (WSDL) and schema definitions (XSD). Leonardo Consulting helps to align Business and Technical BPM.

IMPROVE

PROCESS MANAGEMENT AND IT

Shifting markets, competition and evolving customer expectations all place pressure on your organisation to deliver results faster and with greater agility.

With a standard approach to managing and measuring your process and IT landscape, you are able to enter a continuous improvement cycle that guarantees sustainable results.

OPTIMISE

SPEED AND FLEXIBILITY

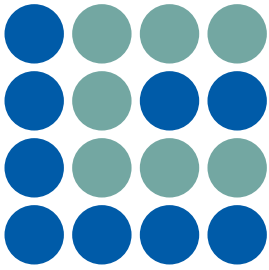

Oracle's Fusion Middleware combines the best of three key ingredients to ensure: Rapid process automation using the SOA suite through process flexibility using BPM techniques captured in the BPA Suite and governed by a framework supported by the SOA Governance Suite.

GOVERN

PROJECTS AND ARTEFACTS

True benefits will manifest from aligning Business and Technical BPM (SOA) through SOA Governance. Governance helps to select services for implementation to maximise the benefits of BPM and SOA strategies.

Our Total Governance ideals employ a method to align people, process, systems, data and services using Oracle SOA Governance technologies to maximise success.

The **ADABT** solution

ADABT is a complete solution toolkit designed to allow any organisation to align Business and Technical BPM environments

THE ADABT TOOLKIT

FRAMEWORK

A customisable framework for implementing this architecture-driven approach

GOVERNANCE

A separate set of defined processes and standards to monitor and federate the methodology and its architecture

TOOLS

A package of technology products mainly from ORACLE's Fusion Middleware Suite

METHODOLOGY

A customisable training and workshop curriculum, covering a range of topics from BPM concepts to specific ORACLE BPA tool usage and more

ROADMAP

A well defined roadmap that allows organisations to map their progress and status

In this collaboration with Oracle we will deliver a solution for aligned process automation providing repeatable speed and flexibility to organisations.

Leonardo Consulting staff are highly trained, personable and focussed on clients' needs and priorities.

Mervin Chiang leads this exceptional program in collaboration with Oracle.

Mervin's experience in systems integration, implementation, service and business process design enables him to approach Business Process Management from a Technologist perspective. This includes software infrastructure setup of BPM tools, BPM training and coaching, designing architecture-driven approaches and solutions for customers using the BPA Suite Platform.

I look forward to working together with you on this outstanding project.
