

Management of ARIS Projects with ARIS Business Architect

INTRODUCTION

Increasingly complex organisational structures demand close integration of Process and IT management in the scope of Enterprise Architecture. ARIS Business Architect and its add-on components enable company-wide and global design of business processes as well as their analysis and optimisation.

BENEFITS

The aim of this training course is to familiarise delegates with the most important phases of an ARIS modelling project. You will be able to adapt your project specific requirements and organise your projects more efficiently. Delegates will further learn to use process analyses to optimise their specific processes.

METHOD

A lecture, practical exercises on the system and discussion.

REQUIREMENTS

Previous participation in the training course Business Process Modelling with ARIS Business Designer or comparable knowledge.

COURSE CONTENT

Project Preparation Phase

- Adapting the ARIS method to a specific project
- The user concept & associated responsibilities.

Modelling

- Adapting automated quality assurance for a specific project
- Importing bulk data
- Exchanging & updating models between databases
- Realising improvements management.

Analysis and Optimisation

- Charts and analysis
- Deriving and comparing model variants.

Implementation

- Publishing models on the intranet (introduction to ARIS Business Publisher)
- Generating Java source code.

Continuous Change Management

COURSE DURATION

Two days.
