

LQ02

LQ02 - Principles of Service-Oriented Architectures

Prerequisites

None

Duration

1 day

Course description

Improving business processes is on top of the agenda for chief and senior executives. Service-Oriented Architectures (SOA) is a paradigm for efficiently organising and using distributed resources within and across organisational boundaries. While SOA is often associated with a technology focus its true benefits, which include process improvement and streamlined utilisation of distributed resources, can only be realised by taking a more holistic business-oriented view.

This one day course provides the means to understand how service identification and processorientation can be key enablers for innovation and change in an organisation. A real-life scenario will guide the participants in analysing and designing services and will show how to align these services with business processes.

After this course you will understand

- the principles of SOA
- the concepts of Service Analysis
- the concepts of Service Design
- best practices and trends in SOA.

You will learn how to

- apply the principles of SOA to your organisation
- assess the potential benefits of SOA for your organisation
- identify services requirements
- design the services that you require
- create your own Service-Oriented Architecture.

The Leonardo Education Curriculum has been carefully designed to develop all of the required capabilities for effective process-based management. There are 14 world class courses in our comprehensive BPM curriculum.

These courses are delivered by the Queensland University of Technology.
